aniPart 3.5 Handles Visual Product Revisions

Animech Technologies' solutions enable companies to streamline communications and speed time to market, reducing costs and increasing revenues.

by DE Editors | Published June 1, 2008

[Animech Technologies](#) (Uppsala, Sweden), updated its technology for visual product communication, and released aniPart 3.5, which features functionality to streamline the complex task of handling product revisions.

Most technical products experience a number of construction changes and updates during their lifetime. The company says aniPart 3.5 puts an end to complex and expensive revisions to update technical information, especially in visualization and utilization of 3D CAD data..

The aniPart Studio 3.5 3D import process will automatically match old objects with new and decide how the changes to the new 3D will apply to the work already invested in the instruction.

By using aniPart software suite, companies can create visual information for service and assembly enabling improved cognitive values even before the real product is ready to launch. aniPart Client 3.5 includes a Play/Pause button and progress bar for actions; aniPart Studio 3.5 offers other new functions.
